

PEER®

Transforming Safety Leadership into Action

Data-management is vital for your Safety Leadership Process to function effectively and exert its full impact.

Don't simply record the number of observations completed or categories of behavior observed.

Make use of the full potential of your observation data to help people improve their safety performance and remove system barriers.

PEER® is a web-based Safety Leadership platform that provides quick access to enter safety observations and reports for companies, departments or work-areas.

Record Observations | Analyze Data | Take Action

BENEFITS

Centralized Database for site-wide or company-wide Safety Leadership Observation Processes

Roll-up the levels of reporting from work-areas to site-wide to company-wide

Monitor behavioral observations and discussion topics over your chosen time periods

Record and track your corrective actions through to completion
